

Teach These Children

Fivefold enrichment

Understanding Potential

When a teacher or adult tells a child, “you’re not working to your full potential”, the power of the concept is lost. Help your child visualize the concept using an age-appropriate story or analogy so they can begin to visualize potential and begin to think about *how they can* work towards achieving it. Use the example story below or create your own.

Activity

Imagine you are Iron Man and you have to defeat 3 villains today. You are battery is charged to 75% when you decide to head out for the day. Flying through the air at top speed, you spot public enemy number one. You engage your tech and defeat him with little effort. As you move on to engage enemy number two, you notice he is twice your size. You spend a great deal of energy using your invisibility cloak and rocket boosters. After some time your opponent weakens and is finally defeated. As you speed off to find your third target you notice your battery is significantly depleted. Just as you spot enemy number three, you hear your battery pack beeping and notice it is flashing at 10%. Public enemy number three is an easy win but you cannot use your tech to defeat him because you are quickly losing power. When we don’t work to our full potential, it means that we have the ability to win... it’s like going to fight a battle and being unable to use all the power we have simply because we didn’t charge up. What do you need to do to make sure you can use all your skills and powers to attack the day?

TIPS

Use perspective- a relatable analogy allows them to see themselves in the story.

Child's belief about self...

I am motivated

Family supports development of...

Growth Mindset

Focus area:
Visualizing

GOAL

Position your child to be able to reach beyond their current level of success.
